

**“An altogether useful tool for a challenging job.”**

Peter Hill  
Director, University Research and Strategic Investments  
**Innovation & Science Research Investments Program**

Dear (NAME),

Reviewing a grant proposal takes time and resources. Reviewing several competing proposals, each with its own balance of feasibility, impact, and alignment with your organization’s mission – that takes more time and resources than you can afford.

As a result, time is wasted and opportunities are missed.

ProGrid helps your organization organize, sort, and rank proposals *in roughly half the time* as using conventional, manual methods.

That means each reviewer can evaluate the same number of proposals in about half the time, reducing fatigue and burn-out. The load on your people is dramatically reduced.

**“Defence R&D Canada used ProGrid in selecting projects. We noted substantial reductions in the time the review committee took to reach consensus.”**

Dr. Robert Walker  
Director, General R&D Programs  
**Defence Research**

In addition to saving time and resources, the ProGrid software also:

- simplifies the comparison of projects from different fields
- enhances transparency
- makes for more easily defensible decisions
- improves peer review performance

Over the past ten years, the ProGrid system has been used to evaluate more than 50,000 proposals and applications, and support more than \$6 billion in investment decisions.

**“There is an overwhelming amount of information. ProGrid helps us organize and sort through it, which helps us make good decisions.”**

Freda Molenkamp  
Director, Production & Food  
**Alberta Agricultural Research Institute**

For more information about how to streamline your review process, visit us online at **[www.progrid.info](http://www.progrid.info)** or call toll-free 1-888-PRO-GRID (776-4743) for a free, no-obligation demonstration.

Best regards,
